

# welcome

March 7, 2024

**Dear Malte,**

it's Carmine who is writing from a markdown cell of welcome.ipynb jupyter notebook. It has been great to meeting you on the 6th March at Spiced.

```
[3]: # This is a python code cell of a jupyter notebook.  
# It's handy because when you run it, you can check directly the output.  
# Line starting with hashtag are comment in python  
  
welcome_python_string = "Hello Malte, Welcome to SPICED!"  
print(welcome_python_string)
```

Hello Malte, Welcome to SPICED!
